

Conference Sessions:

CMS Deep Dive

The conference speakers will address all aspects of RAC, HAC, MICS, and MAC. Besides alphabet soup, these CMS programs all represent critical risk management and operational issues for hospitals. Compliance strategies will be discussed in detail with ample time for audience Q & A.

Risk Management Implications of EMR

While some healthcare risk managers may not yet have received interrogatories requesting electronic information during discovery, all should be prepared to face such requests. As we move towards the goal of 'meaningful use,' it is increasingly important to balance process improvement with potential legal exposure. The conference presentations will provide basic knowledge necessary to prepare for electronic discovery as well as examples of current hospital experiences managing the electronic environment.

Lake Oswego, OR 97035

Conference Registration Deadline:

May 7, 2010

No refunds for cancellations given after this date
May send alternate attendee

CLE Credit Pending Approval

Dear Colleagues:

The Oregon Society for Healthcare Risk Management is pleased to present our program for our 2010 Annual Conference -- Health Care Reform: New Risk Management Challenges.

Health care risk managers face many challenges. The role of the risk manager continues to change, evolve and requires knowledge about many more issues today. Within OSHRM, we strive to share knowledge about these issues and challenges, so that we may keep our patients safe and our organizations prepared and meeting the demanding regulatory compliance rules.

CMS has developed an "alphabet soup" of regulatory challenges for organizations. In November 2009, the OSHRM membership had an educational meeting about SCHIP, MIR and MSP. But the soup continues to get thicker and hotter, so the topic is back by popular demand. Information on the RAC, HAC, MICS and MAC rules will be presented in a way that will allow us to understand and digest the information in a palatable manner.

As health care team members, we understand the value of a complete and accurate medical record. We acknowledge the paper medical record had some challenges, but with the evolution of the electronic medical record (EMR), new issues have come to light and are presenting different challenges. Three presentations will help to inform and educate us on many aspects and implications associated with the EMR.

So, please, come to learn and collaborate with your colleagues. It will be a full day of interesting topics, good food, excellent dialogue and FUN! We look forward to seeing you.

Regards,
Laura Mason, RN
